

FastPOS

Quick Service Solution

Since its incorporation in 1997, **Divergent Technologies Philippines, Inc.** has provided complete, customized, and integrated business and financial solutions for retail distributors and manufacturing companies.

PRODUCT MODULES AND FEATURES

FastPOS was developed to address the needs of fast-food and quick-service store operations to improve the speed and efficiency of their services. FastPOS operates with a touch-screen monitor for ease-of-use while retaining functionality with regular monitors.

FastPOS integrates Graphic User Interface (GUI) to reduce errors during order-entry, and to improve efficiency and productivity of single-store users. Employers therefore need to spend less time training new hires.

FastPOS offers inventory controls to assist in business management. This module accurately tracks available inventory and food cost to assist business managers with pricing, food waste, and marketing. The capacity to produce daily stock reports and re-order lists with budget estimates likewise assist management with restocking.

FastPOS improves speed and efficiency of service, eliminates human error to efficiently monitor both sales and staff performance, and consolidates sales figures.
